I have added a new attribute to the keyword search index however it is not being used in a keyword search

Symptom

• Search terms in a field newly added to the Main Word Index or a locally configured word index are not returning expected results

Applies to

• OLIB 9.0 (all versions)

Resolution

When adding attributes to a word index, the index will need to be rebuilt in order for the relevant search to pick up records which match terms in the newly added attribute.

Additional information

Create the Keyword Index

Configure the Keyword Index
