When setting up OpenAthens for ILLiad, do we set it up as an LDAP or a RemoteAuth connection?

Last updated: Thu, 30 Jan 2020 20:30:29 GMT

Symptom

- You are setting up OpenAthens for ILLiad and you want to know if you should be using LDAP or RemoteAuth Authentication

Applies to

- ILLiad

Resolution

1. You should be using RemoteAuth Authentication using the RemoteAuth: Customizing Settings documentation along with EZproxy or just use LDAP Authentication using the LDAP Authentication: Customizing Settings.

2. If you are using Shibboleth and you are Self-hosted, Atlas has documentation on their Configuring ILLiad to Use OpenAthens documentation.

2. Using OpenAthens directly into ILLiad is still in development at ATLAS.
