Compound objects in the approval queue are stuck because of missing title fields

Symptom

- Compound objects in the approval queue will not process due to missing page-level title field metadata. Error reads: "No title field read. Title field is required - item not added. Error adding page [File_Name.extension] * * * Error loading compound object"

Applies to

- CONTENTdm

Resolution

Please contact OCLC Support with the following information:

- Server ID
- Collection name and/or alias

OCLC Support can manually process the items in the approval queue.

Additional Information

Please provide the collection URL for the items you are having the error with.
