Cannot maximize (re-display) Connexion client from a minimized position in the task bar

Symptom

• In Connexion client you are unable to maximize the client from the task bar icon

Applies to

• Connexion client

Resolution

When you minimize the Connexion client, it becomes an icon in the task bar on your desktop, and you should be able to maximize (re-display) it by clicking the icon. If you are unable to maximize the client from the task bar icon, use the following workaround.

Workaround: Click the Connexion client icon in the task bar, and then press and hold the Windows key (íst mo) on your keyboard while you click the <Up arrow> key.
