Why can't I see the Functions drop-down in Connexion browser?

Symptom
• You want to edit a MARC record in Connexion browser, but don't see the Functions drop-down on the far right that allow you to make edits.

Applies to
• Connexion browser

Resolution
You can toggle the Function lists using either the keystroke <ALT><Y> or by selecting Show/Hide Functions List from the View menu.

You likely have your General > Admin Options > Preferences > Cataloging Options set to use MARC Text Area rather than MARC Template. Change the Bibliographic Record View setting to MARC Template and the Mode for Single Record from Search Results setting to Edit Mode.

Additional information
You can learn more about Connexion browser's Cataloging Options.
