What customization key in the Customization Manager allows for languages other than English on default request pages?

Question

• What customization key in the Customization Manager allows for languages other than English on default request pages?

Applies to

• ILLiad

Answer:

The key is called **WebDefaultAcceptNonEnglish**. It is most easily found by beginning to type the key name at the top in the search box. Note: This change will not reflect if applied in test web, it will only work for live web pages.
