How do I set up Rush Processing in ILLiad?

Last updated: Tue, 30 Mar 2021 18:54:00 GMT

Symptom

- You want to set up Rush Processing for ILLiad

Applies to

- ILLiad

Resolution

To set up Rush Processing for ILLiad, you will need to set up the following:

1. Set up a routing rule that has the match string something like t.Rush = 'Rush' and t.RequestType = 'Article' for an Article. More information is at Configuring Routing rules.
2. Set up a Custom Queue so it matches the New Transaction Status you set up in the Routing rule such as "Rush Request Processing."
3. Set up a Billing Service Level for Rush. Information on this is found at Billing Service Levels.
