How can I get a list of LBD control numbers for bulk editing?

Last updated: Mon, 24 May 2021 15:06:09 GMT

Applies to

• WorldShare Record Manager
• WorldShare Collection Manager

Answer

If your bibliographic or local holdings records have something in common that is indexed in WorldCat, you can use a query collection to pull relevant records and interleave LBDs to return the control numbers in addition to the variable fields.

For example, if all records are in a single shelving location, you can use the query: \texttt{li:[OCLC symbol] AND b8:[shelving location]}
