Where can I get a list of the different Email fields that can be inserted into Notification template

Symptom
- You are looking for the list of email template fields that can be inserted in a notification template

Applies to
- ILLiad

Resolution
There is not a current list of fields you can look at other than when you are in a notification template. Here are some options you can find the fields.

1. When you are in a box in the Notification Templates, you can right-click on the space and you will see the different options based upon the tables, and then if you go to the table, you can see the available fields.
2. If you want, you could get screenshots of the different fields you see for the tables such as LocalInfo and Transactions, and then get your list that way.
3. You should also contact ATLAS UserVoice and let ATLAS know that you want a list of the fields.
