Is it possible to prefix the contents of a field using the Find / Replace tool in Project Client?

Last updated: Tue, 01 Mar 2022 16:22:33 GMT

Symptom

• You need to add text to the beginning of the contents of a field in your Project Client collection.

Applies to

• CONTENTdm

Resolution

Yes, you can prepend text onto the contents of a field using the Regular Expressions option in the Find / Replace tool. To do so, set the Find what: field to ^ (SHIFT-6) and the Replace with: field to the text you want to prepend to the data. It should look something like below.
